TAG Announces New Rugged 2U Server for Tactical Applications

Dulles, Virginia (January 14, 2003) – TAG, a leading manufacturer of tactical IT products, today released a new 2U (3.5") rugged, rack-mount server for use by the US military in extreme environmental conditions. The unit is available with single or dual Pentium Xeon processors, Intel's latest server platform. The 2000 Series has been designed to meet various stringent MIL standards including sand/dust, shock/vibration, and temperature. The new server will provide the warfighter with even greater product durability, reliability, and performance and will be deployed in naval vessels, military command shelters, and remote reconnaissance posts.

The new 2000 Series now features standardized hard drive carriers and receivers which allow interchangeability between all TAG servers and RAIDs, enabling easier maintenance and reducing the need for carrying varying sparing kits.

"Our mission includes providing maximum value to our customers, which entails listening to their needs and delivering innovations that work for them. We've responded with a product that is stronger, faster, and even easier to use and maintain than ever before," said TAG COO Jim McEwan. "We intend to continue our tradition of developing IT solutions that help our military when and where they need it most."

Technology Advancement Group, Inc. (TAG) resolves our customers' IT challenges with world-class engineering, manufacturing and integration, and lifecycle management. TAG provides unmatched reliability for your C4ISR Systems through cost-effective turn-key solutions designed for any environment. For more information visit, www.tag.com or email at itarmor@tag.com.
