TAG Launches Cutting-Edge Ultra-Mobile PC

Dulles, Virginia – August 12, 2009 – Technology Advancement Group's® Inc. (TAG®) released their newest product, the second generation of the TC-100 Commander™, today. This latest device from TAG defines the cutting edge of fast, mobile handheld computers, featuring a sunlight readable display, a touch screen, unparalleled I/O flexibility, and customizable button configurations.

TAG's TC-100, also known as the "Commander," sets the stage for mobile computers with state-of-the-art technology, specifically hardened to resist the harshest environments of modern tactical field applications. The updated model provides the performance of a dedicated, lightweight (3.8 lbs) computer in a streamlined, portable form factor.

"We at TAG are thrilled to have completed our most innovative product yet," said Matt Hederstrom, Vice President of Systems and Services. "Providing such a high-performance, rugged, flexible device is already solving some tough problems for war fighters, first responders, and industrial customers around the world."

The Commander is available with advanced features such as GPS, Bluetooth, Wi-Fi, video capture, hard-drive encryption, night-vision compatible display, and cellular connectivity. Built-in expansion slots afford mobile users endless flexibility for field applications.

Its ergonomic, handheld design is completely ruggedized and designed to meet MIL-STDs for shock and vibration. An IP-67 rated chassis protects against sand & dust, extreme temperatures, and moisture. Data is secured and battery life extended for optimal field operations. Dual hot-swappable batteries allow for more continuous time in the field without interrupting active tasks.

Different applications may require varying button placements and accessories – each of which can be built into the design. This flexibility is invaluable to end-users in a mobile environment who need the latest technology. In addition to the Commander's many standard features, a number of additional accessories are available to accompany various needs. For example, TAG offers a lightweight spare battery pack, vehicle mount with or without integrated keyboard, vehicle charger, thigh holster, carrying cases, and much more.

Technology Advancement Group, Inc. (TAG) resolves our customers' IT challenges with world-class engineering, manufacturing and integration, and lifecycle management. TAG provides unmatched reliability for your C4ISR Systems through cost-effective turn-key solutions designed for any environment.
